

# Agri-Vac

## GRAIN BAG UNLOADER

Simplifies labor required when emptying grain storage bags.

The tractor steers the gathering augers, keeping them centered inside the bag.

Inherent weight acts as a counterbalance for lifting/winding bag.

INC.

**TOUGH TO BEAT IN THE LONG RUN**

Experienced in the manufacturing of feed and grain handling equipment, Walinga is first for quality.

**SPECIFICATIONS:**

- Versatile enough to easily connect and disconnect to the rear of the grain vac.
- Hydraulic powered gathering augers & bag winders are used to move all the grain to a central suction inlet inside the bag that is connected to the grain vac via flexible suction tubing.
- As the Walinga Vac Grain Bag Unloader moves rearward into the grain bag, the grain vac is pulled forward as needed by the tractor powering it to stay in close proximity.
- Height control, counterbalance and hydraulic power is provided by connection to a smaller tractor, acting as a prime mover for the Walinga Vac Grain Bag Unloader.
- Use of a suitable length suction tube between the two pieces of equipment allows the operator to only move the grain vac forward when changing trucks.
- The bag is wound onto steel tubular cores that can easily be removed by one person.

Walinga builds solutions for most of your grain-handling needs.
